

My website adopts design elements reminiscent of the American Red Cross site, crafted using HTML/CSS. However, it's important to clarify that all information presented on the website is fabricated and does not reflect actual data or operations.

Here is a visual representation of the database structure illustrating how my website stores data.

The screenshot displays the phpMyAdmin web interface. The left sidebar shows the database structure, including a 'test' database. The main panel shows the 'test' database selected, with a table named 'test' displayed. The table structure is defined by the SQL query: `SELECT * FROM `test``. The table contains 5 rows of data, showing columns for Name, Email, Phone Number, and Donor. The interface includes various navigation and management tools, such as 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', 'Import', 'Privileges', and 'Operations'.

	Name	Email	Phone Number	Donor
<input type="checkbox"/>	edward	edward@gmail.com	58741236947	5697
<input type="checkbox"/>	enola	enola000@gmail.com	12188546855	
<input type="checkbox"/>	jacob	jacob000@gmail.com	12134546855	
<input type="checkbox"/>	Thomas	tommy@gmail.com	0000000001	00001

Thank you for your collaboration. Hopefully, this assistance will prove valuable to your project. Best of luck with its further development.
